Summary

Backend Engineer with 2+ years of experience in distributed systems, cloud infrastructure, and DevOps. Led migration of 15+ microservices from AWS to GCP with near-zero downtime, reducing infrastructure costs by 30%. Proven track record in Kubernetes orchestration, CI/CD automation, observability, and maintaining high-availability systems processing 10,000+ daily transactions.

Education

National Institute of Technology Rourkela
Bachelor of Technology in Electrical Engineering

Dec 2020 – May 2024

Experience

Software Engineer

Juspay

Bangalore, IND

Aug 2024 – Current

- Led full platform migration of 15+ microservices from AWS EKS to GCP GKE, managing Kubernetes clusters, VPC networking, load balancers, and DNS, achieving near-zero downtime and reducing infrastructure costs by 30%.
- Architected zonal-to-regional GCP migration with multi-zone pod distribution and cross-zone replication, reducing monthly platform downtime from ~2 hours to under 1 minute.
- Deployed and managed Istio service mesh with Envoy sidecar proxies, configuring circuit breaking, rate limiting, mTLS, and traffic splitting for canary and blue-green deployments.
- Built comprehensive observability stack using Prometheus, Grafana, and Kiali, monitoring 15+ production microservices and reducing MTTR by 100% for systems processing 1M+ events/day.
- Integrated Apache Kafka as event-driven messaging backbone, designing topic architectures with DLQ patterns and exactly-once semantics for order processing and merchant notifications.
- Automated Envoy and Squid proxy configuration deployment with validation checks and rollback capabilities, eliminating 30+ minutes of manual rollout and reducing human error by 90%.
- Optimized PostgreSQL and ClickHouse performance through index tuning, query plan analysis, and connection pooling, reducing query latency by 50% across critical service paths.
- Deployed Redis caching layer with distributed locking and rate limiting, improving API response times by 60% for high-traffic systems handling \$10M+ annual GMV.
- Enhanced CI/CD pipelines with automated testing stages, health-check-based rollback triggers, and configuration versioning, reducing deployment failures across the team.
- Resolved 50+ P0 production incidents with detailed post-mortem analysis, implementing preventive measures including automated failover and self-healing capabilities.
- Built structured stress testing automation with configurable traffic patterns (steady state, spike, ramp-up), integrated with monitoring dashboards for early performance regression detection.
- Configured horizontal pod autoscaling (HPA), resource limits, and RBAC policies across GKE clusters, ensuring efficient resource utilization and network segmentation during traffic spikes.

Software Engineer Intern

Juspay

Bangalore, IND

Dec 2023 – Aug 2024

- Built scalable address validation microservice from scratch with Redis caching and external API integration, reducing delivery failures and RTO by 75% for 30K+ monthly orders.
- Set up AWS anomaly detection with Prometheus alerting and intelligent routing, reducing alert fatigue by 30% and unresolved incidents by 25%.
- Implemented structured logging system processing 1M+ logs/day with correlation IDs, improving incident diagnosis speed by 80%.
- Containerized applications using Docker and managed Kubernetes deployments with health checks, HPA, and automated rollback strategies.

Projects

Redis-Haskell (In-Memory Key-Value Store)

[redis-haskell](#) [🔗](#)

- Built a Redis clone in Haskell with TTL support, lens-based immutable state management, and interactive CLI, demonstrating systems programming and functional programming expertise.

Lilac (TypeScript Logging Package)

[lilac-typescript](#) [🔗](#) [npm](#) [🔗](#)

- Developed and published a lightweight TypeScript logging package to NPM with custom transports (console, file, remote), cutting debugging time by 20%.

Technical Skills

Languages: Haskell, TypeScript, Python, Go, Shell/Bash, SQL, C++

Backend Frameworks: Node.js, Express, Servant (Haskell), FastAPI, GraphQL

Databases: PostgreSQL, ClickHouse, Redis, ScyllaDB, MongoDB, MySQL

Cloud & Infrastructure: AWS (EKS, EC2, S3, CloudWatch, VPC, Lambda), GCP (GKE, Cloud SQL, Pub/Sub, IAM), Docker, Kubernetes, Helm, Istio, Envoy

DevOps & Observability: CI/CD, Prometheus, Grafana, Kiali, Kibana, Kafka, Vector, OpenObserve, Linux
